All-electric warship

The U.S. Navy's use of manpower and weaponry stands to be impacted by research at the Univ. at Buffalo, N.Y., that is helping in the development of a next-generation, all-electric warship. Using nano- and micro-electronics, scientists plan to design power electronics capable of supplying high-current density and power to all areas of the warship. This integrated electric system will result in the computerization of most of the electric warship's operations and reduction of the crew to 100.
